Tango/04 wins Westports Malaysia monitoring deal

- **Tango/04 teams with Privasia to monitor Westports Malaysia's e-terminal**
- **Tango/04 monitors multiple platforms like Solaris and IBM iSeries servers, ensuring 100% availability**
- **Westports Malaysia is part of Port Klang, Malaysia's biggest port complex**
- **Tango/04 is Europe's leading real-time BSM monitoring solution**

Barcelona/Port Klang (01.02.2008) – Tango/04, developer and provider of monitoring solutions has won the project to monitor Westports Malaysia's e-terminal, the country's most modern port handling information system. Together with leading Malaysian IT-consultancy Privasia, Tango/04 monitors Westports' Solaris and IBM iSeries as well as its Oracle engines, ensuring 100% availability of Westports' e-terminal.

Westports is part of Port Klang, port of import and export for Malaysia's capital Kuala Lumpur, and Malaysia's state-of-the-art port facility. Its e-terminal gives vessels and traders the possibility to visualize vital port information in real-time reports and statistics. Before arriving at berth side, vessels can retrieve port traffic information, contact cargo traders and get an overview of the costs of port operations and anchorage fees.

Tango/04's monitoring solution allows Westports' IT-staff to visualize the status of its multi-platform environment (Solaris, iSeries) as well as its Oracle engines. Previously it was difficult sifting through all the application and server data, now it is much easier thanks to centralized monitoring with Tango/04. Before there was uncertainty as to where an IT-incident took place, now staff members receive emails or text messages, explaining to them exactly where a problem is occurring. This has helped to keep response times to a minimum and has allowed Westports to offer their services around the clock.

Tango/04 wins Westports Malaysia monitoring deal

Tango/04 CEO and founder Raúl Cristián Aguirre is delighted with this new win, signalling the expansion Tango/04 is making around the globe. *'We are slowly becoming the solution of choice for companies that depend heavily on IT and Business real-time support. We now provide the only real alternative to the traditional "big four" framework monitoring solutions.'*

About Tango/04 Computing Group

Tango/04 Computing Group is one of the leading developers of software solutions for Application monitoring, Security and Compliance monitoring and the management of Business Services (BSM) and Service Level Objectives (SLM). Established in 1992, Tango/04 has a wealth of experience in providing tailor-made monitoring solutions to companies in any industry.
