The New Tango/04 Data Monitor Simplifies Compliance and Fraud Prevention

- New real-time auditing solution monitors all insert, update and delete operations performed to specific records in sensitive tables
- Historical track of changes helps companies easily comply with SOX, 21 CFR Part 11, HIPAA and other auditing regulations
- Tango/04 Data Monitor helps companies prevent fraud, loss of data and fines without impacting system performance

BARCELONA, Spain, September 27, 2005. – Tango/04 Computing Group, a leading developer of software solutions for Systems Management, Security and Business Service Management (BSM), today launched its new record-level auditing solution: Tango/04 Data Monitor.

Fast to deploy and easy to use, Tango/04 Data Monitor captures in real-time all insert, update and delete operations performed to specific records in sensitive tables, alerting security and compliance officers when integrity and confidentiality of data are at risk.

Audit trail databases are kept by Tango/04 Data Monitor to generate historical reports of changes with the integrated Reporting System module.

Together, the real-time monitoring and historical reporting capabilities of Tango/04 Data Monitor help companies comply with regulations that require data auditing, such as the Sarbanes-Oxley Act (SOX), the Basel II Agreement, FDA's 21 CFR Part 11 and HIPAA.

In addition, companies at industries such as banking, financial and insurance can use Tango/04 Data Monitor to prevent fraud, accidental loss of data and other threats to the integrity and confidentiality of their corporate data.

Tango/04 Data Monitor is a multi-platform solution that currently supports IBM DB2 UDB for iSeries and Microsoft SQL Server databases. Support for Oracle databases will be shortly available.

The most complete data auditing solution

Everyday there are more regulations that require companies to guarantee the accuracy, integrity and confidentiality of their data. Fraud and accidents can always occur.

- Who modified the INVOICES table between 12 A.M. and 5 A.M.?
- What changes to tables has user SMITH performed lately?
- What changes were made to the DISCOUNT field in the last quarter?
- What changes were performed to the CUSTOMER field without using the company's ERP?
- How many insert and delete operations were made in the EMPLOYEES table last year?
- Who has modified the SALARIES table without being part of the Human Resources user group?

With the new Tango/04 Data Monitor, companies can answer all these critical questions quickly and easily.

Tango/04 has developed the new Data Monitor solution in response to market needs and with the goal of helping companies satisfy any legal auditing requirements, both internal and external.

Designed according to widely accepted auditing and security best practices, such as ISO-17799, COBIT and ITIL, it can detect and prevent in real-time any attempt to improperly or illegally use corporate data, helping companies prevent fraud and providing proof of malicious manipulation that can be used as legal evidence.

Easy to use, implement and maintain

Tango/04 Data Monitor audits operations performed only on custom specified files, avoiding unnecessary performance degradation. Users can configure specific operations and fields to be monitored for further resource usage optimization.

Tango/04 does not use triggers and does not require modifying existing applications. As a result, system performance is not penalized and the auditing environment can automatically adapt itself to future changes in the structure of tables without the need of manual maintenance.

Advanced Reporting Capabilities

Tango/04 Data Monitor offers a wide range of custom reports for forensic analysis, suspicious activities detection, traceability, auditing and compliance. Reports can be automatically sent to email recipients in PDF, XML, HTML or RTF formats, and can also be published on the corporate Intranet.

Tango/04 Data Monitor can be executed in batch mode to generate historical auditing reports during low workload hours.

It can also mask confidential information (like credit card or salary details) to protect data privacy.

About Tango/04 Computing Group

Tango/04 Computing Group is one of the leading developers of software solutions for Systems Management, Security and Business Service Management (BSM). Tango/04 software helps companies maintain the operating health of all their business processes, improve their service levels, increase their productivity, and reduce costs through intelligent management of their IT infrastructure.
