Tango/04 VISUAL Control Center achieves IBM ServerProven designation

BARCELONA, 24 February 2004 – Tango/04 Computing Group, one of the leading developers of systems management and automation software, today announced that IBM has verified its VISUAL Control Center solution for iSeries performance management and granted it the ServerProven designation.

The following are four screen-shots of VISUAL Control Center that are available to editors as JPG files just by contacting marketing@tango04.net. Each includes a suggested photo caption that depicts the contents of each picture.

Fig 1. Tango/04 VISUAL Control Center provides a performance management 'cockpit' from which multiple iSeries servers and logical partitions (LPARs) can be supervised in real-time

Fig 2. Tango/04 VISUAL Control Center generates web-based graphics of iSeries key performance metrics to produce Performance Portals that can be accessed wherever there is a web browser.

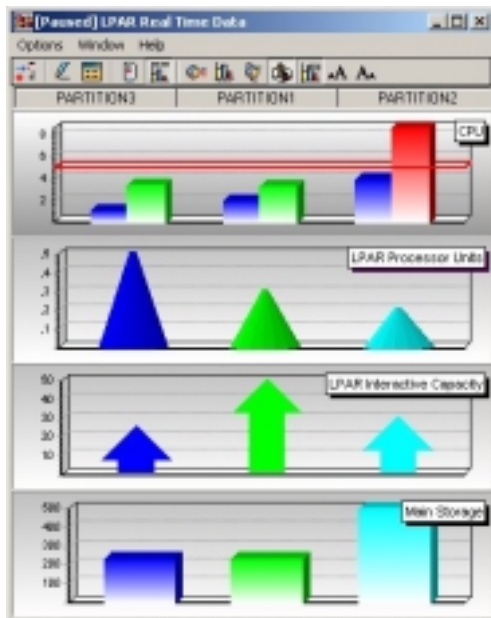

Fig 3. Tango/04 VISUAL Control Center Full LPAR support allows iSeries operators to manage the distribution of system resources among logical partitions.

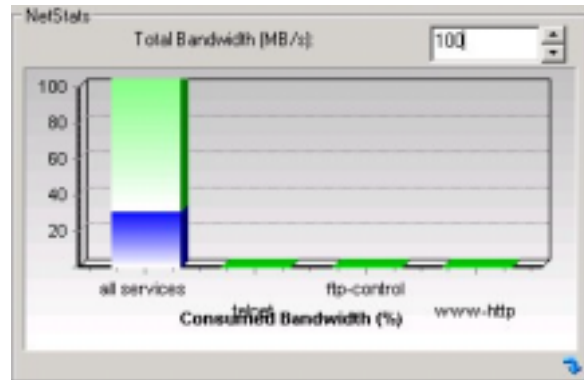

Fig 4. Tango/04 VISUAL Control Center now incorporates network traffic monitoring. Total bandwidth usage can be measured for individual network services or devices.
