

VISUAL securitysuite

Real-Time Alerts.
Easy auditing and compliance.
Advanced self-protecting capabilities.
Enterprise security event consolidation.

Tango/04 VISUAL Security Suite allows you to implement auditing controls, security dashboards and self-protecting capabilities in record time. Demonstrate regulatory compliance without the need for custom programming, and with minimal resource usage.

Complete Security Dashboard

Use the SmartConsole to implement a custom security and compliance dashboard to meet your needs and those of your company's high-level executives. You can consolidate events from Antivirus, IDS, Firewalls, High Availability solutions and other network components, or integrate SmartConsole with your existing systems management framework.

iSeries Security

Tango/04 software uses a simple interface layer that greatly enhances the power and ease of use of OS/400 auditing capabilities, so you can quickly enable and optimize audit controls for data changes at record level (without using triggers), object access, (e.g. read, change or delete), user activity including command line auditing, user profile management (profiles created, deleted, changed), OS changes (system values, audit configuration, etc.), SQL use (both interactive and batch) and exit point security (powered by PowerLock).

Windows Security

Audit in real time the configuration of your Windows servers, including changes to your audit configuration, privileges and directory services. Control access to systems and files, user

profiles, passwords and use of removable storage devices throughout your network. Do you have too many security logs? Monitor your Windows Event Log and any free-format text logs from firewalls, applications, and devices in real time. Detect suspicious situations, and react in time to threats.

Linux, UNIX and AIX Security

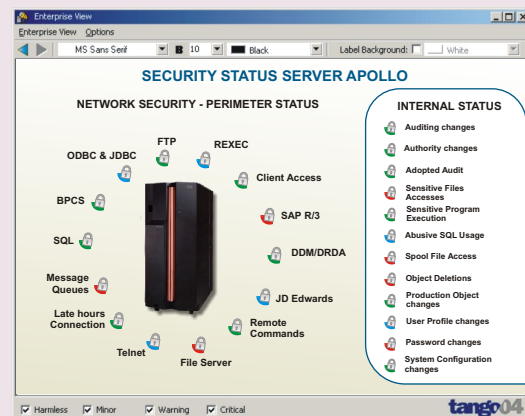

Extend monitoring and auditing of users, files, objects, commands and systems to your Linux, UNIX and AIX servers, or to any network device using SNMP.

Database Security

Audit user activity, role changes and administrator operations on your IBM DB2, Oracle and Microsoft SQL Server databases. Monitor access to sensitive files and track changes (insert, update, delete) at record level. Comply with laws that require record keeping, auditing and tracking of changes, and prevent fraud.

Powerful Reporting

Our flexible Reporting System helps you instantly create HTML, RTF or PDF reports to demonstrate the effectiveness of your security strategy to auditors and senior management.

Benefits

- Consolidate security events from iSeries, Windows and all other network elements
- Manage your entire network from a single security dashboard
- Automate the enforcement of your security policy
- Be alerted to suspicious activity and solve problems instantly
- Avoid downtime, fraud, information theft and fines
- Easy configuration and maintenance. Save time!
- Generate auditing reports to demonstrate compliance with privacy laws, SOX, HIPAA, 21 CFR Part 11, etc.

distributed by

VISUAL Security Suite is a Tango/04 solution that enables companies to manage and protect their systems and applications, optimizing performance and reducing operating costs.

Solutions for Advancing People

Why Do You Need VISUAL Security Suite?

Use VISUAL Security Suite to manage all your security and auditing controls and demonstrate compliance with privacy laws, SOX, HIPAA, 21 CFR part 11, ISO 17799, etc.

Integrated Audit of Servers and Databases

VISUAL Security Suite's monitoring engine audits the availability and integrity of your Windows, Linux, AIX and iSeries servers, and those of your databases too. Its universal parsing technology, based on dynamic syntax, helps you control in real time plain-text logs with any format.

Open Architecture to Support your Future Needs

VISUAL Security Suite provides you with an open architecture to integrate with your existing infrastructure and applications: antivirus, firewalls, routers, IDS, etc. You can also export data to your HelpDesk or to other corporate IT consoles.

Extremely easy to use . . . Even If You're Not an Expert

Security policies and regulations change over time. You need a simple and flexible solution to create and maintain your automated controls and keep costs to the minimum. Ease of use is one of the key features of VISUAL Security Suite. It will guarantee a fast Return on your Investment, even if you are not an expert in any particular platform or database.

SQL Controls

- Instance status
- Changes to Roles and Users
- Transaction Log
- Connections and access
- SQL usage
- Blocks
- Table scanning
- Objects
- Errors
- Windows Processes
- Etc.

Oracle Controls

- Administrators
- Profiles
- Roles and Users
- Windows processes
- Special privileges
- Relevant users
- Tables
- Superuser activity
- Authentication
- Etc.

DB2 UDB Controls

- Use of special edition programs (DFU, STRSQL, etc.)
- Exit point access restriction
- SQL usage
- Interactive SQL usage
- Access to records
- Etc.

iSeries Controls

- System access
- Profiles and users
- Special user activity
- Adopted Authority
- Sensitive commands
- Objects
- System values
- Spool files
- QSYSOPR, QHST, QAUDJRN and any log
- Inactive users
- Use of service tools
- Object save and restore
- Etc.

Windows Controls

- Changes to audit configuration, privileges, directory services, etc.
- Complete Event Log monitoring in real time
- Automated control of logs with any format
- File and directory access
- Changes to system files
- External storage use
- Invalid logins
- Inactive Users
- Etc.

Linux, Unix, AIX Controls

- Changes to system configuration
- Complete syslog checks in real time
- Superuser control
- Invalid logins
- Changes to files and objects
- Change to privileges and accounts
- Automated control of logs with any format
- Changes to security policy
- Suspicious processes
- Etc.

Learn how to protect your data and ensure compliance now!
