Tango/04 Enhances Its Security and Audit Solution, Focuses on SMBs

- VISUAL Security Suite's SmartConsole now combines real-time IT security management and audit controls in a single dashboard
- Advanced consolidation and automation simplifies compliance with HIPAA, SOX, SB 1386, 21 CFR Part 11 and European privacy laws
- New modular architecture offers best value for SMBs with its increased flexibility, scalability, power and ease of use

BARCELONA, Spain, March 1, 2006. – Small and medium businesses (SMBs) seeking to protect their sensitive data, consolidate the management of IT security across platforms and comply with security best practices and audit-related regulations, will benefit from the improved flexibility, scalability and ease of use of the new Tango/04 [VISUAL Security Suite](#) 1.5.

Released today by Tango/04 Computing Group, a leading developer of software solutions for [Systems Management](#), [IT Security](#) and [Business Service Management](#) (BSM), this release of VISUAL Security Suite has a new modular architecture designed to help SMBs tackle their IT security and audit control projects simultaneously, effortlessly and very quickly.

This new structure specifically addresses SMBs that are required to implement [Sarbanes-Oxley](#) (SOX) Section 404 controls before June 2006. However, new modules within VISUAL Security Suite also make it a powerful and versatile solution for companies subject to HIPAA, SB 1386, FDA's 21 CFR Part 11, the Basel II Accord and European privacy laws.

"Besides managing the growing complexity of their infrastructure, IT Managers face the challenge of strengthening security and delivering top quality service to users," said Raul Aguirre, President and CEO of Tango/04 Computing Group. "At the same time, they are required by top executives to implement the necessary audit controls to meet regulatory requirements. Helping IT Managers easily and efficiently solve all these dilemmas is the purpose of VISUAL Security Suite."

Simplifying Security and Auditing

With simplicity and ease of use in mind, VISUAL Security Suite helps companies manage the massive amount of heterogeneous information coming from every infrastructure component and application. It consolidates logs with any format, prioritizes events according to their business impact, and automatically filters out irrelevant and false events.

Built around a core [SmartConsole](#), VISUAL Security Suite can be quickly and easily configured to deliver high-level security management and audit control dashboards, with powerful [reporting](#) capabilities, to non-technical company executives (CEOs, CFOs), IT Managers and Security Officers.

“This functionality can be implemented in weeks, slashing the time required to deploy an effective compliance management environment, but also helping IT departments to get their projects authorized by managers more quickly,” Raul Aguirre added.

For IT Managers, the new business process modeling, consolidation, event correlation, action automation, alert and escalation capabilities of VISUAL Security Suite, reduce the complexity of IT security management and simplify policy enforcement across user profiles, applications, servers, databases, network equipment and third-party security products.

The new [Tango/04 Data Monitor](#) add-on module enables record-level auditing of changes to IBM DB2 for iSeries and Microsoft SQL Server databases to detect suspicious activity, prevent fraud and comply with regulations that require audit trail and data auditing capabilities. Oracle database support will be announced shortly.

Tango/04 VISUAL Security Suite offers the best value for small and medium businesses because most of this functionality is included in the core Basic Package. Setup, customization and maintenance can be performed in-house, to meet current and future needs.

Advanced Data Protection and Audit Control

Companies with strong auditing requirements or whose critical business services reside on specific servers or database systems can customize VISUAL Security Suite with specific agents to address their particular needs, including:

- Security, availability and performance agents for [iSeries](#), [Windows](#), [Linux](#), [AIX](#), [Sun Solaris](#) and [UNIX](#) servers with UDP Syslog support
- Auditing agents for [IBM DB2 UDB for iSeries](#), [Oracle](#) and [Microsoft SQL Server](#) databases
- Application agents for Lotus Domino, WebSphere, DataMirror, MiMiX and Vision/Orion, among many others.

For iSeries-centric businesses, Tango/04 [iSeries SQL Monitors](#) are included in the suite, reinforcing the protection of the critical data stored in iSeries systems by auditing all SQL statements executed by users and programs.

Many international companies are already using VISUAL Security Suite. [Henry Schein](#), a worldwide distributor of dental, medical and veterinary products, relies on Tango/04's solution to implement SOX Section 404 controls. A leading Spanish bank uses VISUAL Security Suite for all its data auditing and security management needs.

License prices for VISUAL Security Suite (Basic Package) range from US \$3,800 to \$60,000 per server, depending on its operating system and other technical specifications. Additional modules and extensions for Linux, UNIX, database auditing and other advanced functions can be purchased separately. Special discounts are available with the purchase of multi-server licenses.

About Tango/04 Computing Group

Tango/04 Computing Group is one of the leading developers of software solutions for Systems Management, Security and Business Service Management (BSM). Tango/04 software helps companies maintain the operating health of all their business processes, improve their service levels, increase their productivity, and reduce costs through intelligent management of their IT infrastructure.

Tango/04 has more than a thousand customers who are served by over 35 authorized Business Partners around the world.
